

# ENTERPRISING EQUIPMENTS

## PVC PROFILE PRINTING MACHINE

### Features:

- The machine can print, and enable UV coating and curing on different kinds of hollow PVC profile or solid profile sunmica board and similar flat surfaces.
- The machine is available in various sizes like 12", 24", 30", 36", 40" and 50"; available in offline and online system.
- Can also print on aluminium composite panels, glass and rigid surfaces.
- The whole machine is AC derive with frequently drive.
- The whole machine can change the profile thickness in seconds.
- High production output and less maintenance required and digitally controlled.

## STAPLE PIN MAKING MACHINE

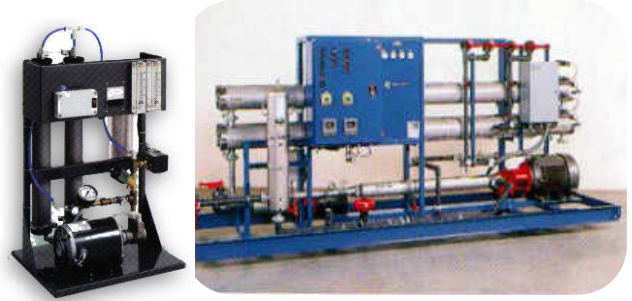

Production capacity per minute:- 200 to 350 staples depending upon, size, type and wire. Electricity required:- 3 /4 H.P. 1440 R.P.M. Wire Length:- 8mm to 55 mm. Shoulder width:- 4mm to 15 mm, Wire Diameter:- 0.35 mm to 0.90 mm.

The machine has flexibility to take care of office stationary stapling and industrial applications for various uses like packing, textile and garments, wood working, shop and detergent units, laundries, electrical units, etc.

## REVERSE OSMOSIS SYSTEMS

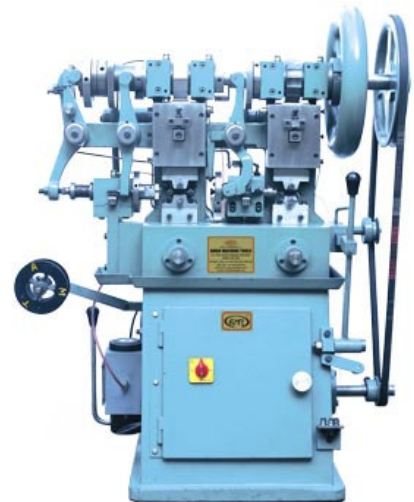

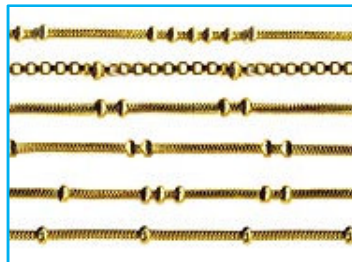

Reverse Osmosis Systems are capable of producing high quality water for packaged drinking water (conforming to IS 14543), process water, boiler feed fresh range of RO systems are manufactured using the most advanced materials including non-corrosive FRP pressure vessels, imported SS high pressure pumps, internationally renowned membranes and is backed by an efficient and effective after sales service to ensure that the equipments provide efficient performance for many years.

**Applications:** For meeting drinking water requirements in commercial units producing packaged drinking water, homes and residential complexes, schools, colleges and hospitals, factories and offices, restaurants and canteens and areas hit by scarcity of potable drinking water

## BALL CHAIN MAKING MACHINE

Handles large scale production of high quality ball chains. Ball Chain manufacturing machines have the capability to handle balls of varying sizes of diverse materials. Ensuring precision and accuracy, these machines ensure high levels of performance in every aspect of production. Suitable for the production of ball or other shapes in small dimensions by simply changing Dies. From 0.80 mm to 3.00 mm in the above mode.
